Nationality: Indian · Notice period: 60 days · Languages: English, Malayalam, Hindi, Tamil

PROFESSIONAL SUMMARY

Full Stack Developer with 8+ years of experience building and maintaining production software in Node.js, TypeScript, NestJS and React. Currently Lead Backend Engineer at InApp Information Technologies, owning backend architecture, mentoring engineers and delivering enterprise platforms end to end, from client discovery and design through testing, deployment and support.

Experienced in API development, microservices, database design and cloud integrations (AWS, GCP, Docker), with a strong focus on code quality, testing and debugging. Applies Spec-Driven Development (SDD) and AI-assisted workflows on live client projects, and brings Forward Deployed Engineering (FDE) skills: working directly with customers to turn real business problems into working systems.

CORE SKILLS

Backend: Node.js, TypeScript, NestJS, Express.js, REST APIs, Microservices, Prisma, BullMQ, System Design
Frontend: React (screens, features, dashboards), JavaScript, TypeScript
Databases: PostgreSQL, MySQL, MongoDB, Redis, Database Design
Cloud & DevOps: AWS (S3, SQS, SNS), Google Cloud Platform, Docker, CI/CD
Auth & Integrations: Keycloak SSO (OIDC, SAML, OAuth2, PKCE), JWT, RBAC, Dynamics 365 CRM, Razorpay, CCAvenue
Quality: Software Testing, Debugging, Code Reviews, Performance Optimisation, Security Best Practices
Engineering Practices: Spec-Driven Development (SDD), AI-Assisted Development, Seed Engineering, Forward Deployed Engineering (FDE), Agile, Python scripting

PROFESSIONAL EXPERIENCE

Systems Analyst Engineer (Lead Backend Engineer) — InApp Information Technologies

Aug 2021 – Present · Thiruvananthapuram, Kerala

- Lead and mentor a team of up to 8 engineers; run code reviews and set coding standards for maintainable, well-tested code.
- Lead backend architecture and microservices design in NestJS and TypeScript across enterprise client platforms.
- Own delivery end to end: client discovery, requirements, solution design, development, testing, deployment and production support.
- Build React screens and features alongside backend work on platforms including GSB and PGOS.
- Introduced a spec-driven (SDD) workflow with design docs, ADRs and verified, human-signed-off change cycles.
- Work with DevOps on CI/CD and cloud deployments on AWS and GCP.

Software Engineer — Accubits Technologies

Oct 2018 – Aug 2021

- Built backend APIs and microservices with Node.js, Express.js and TypeScript for blockchain, healthcare and enterprise platforms.
- Implemented authentication, authorisation and secure data-handling workflows integrated with React dashboards.

KEY PROJECTS

NDP — NASSCOM Digital Platform

NestJS · Prisma · MySQL · MongoDB · Redis/BullMQ · Keycloak · Dynamics 365 · Docker

- Built the complete Phase 1 backend from scratch: 17 NestJS modules and 97 TypeScript source files.
- Integrated Keycloak SSO with external identity providers (SAML, OIDC, OAuth2) and PKCE mobile auth, Dynamics 365 CRM, Power Automate flows and Razorpay/CCAvenue payments.
- Delivered using a spec-driven (SDD) workflow: project design docs, ADRs and a propose → apply → verify → archive loop with human sign-off.
- Worked directly with NASSCOM stakeholders on discovery, requirement questionnaires and integration scoping for the events and membership modules.
- Resolved production issues including a TLS certificate-chain failure breaking Android login and an encoding bug in the payment flow.

GSB — Global Seal of Biliteracy Credentialing Platform

NestJS · TypeScript · React

- Led backend architecture for a secure credentialing platform serving 25,000+ users.
- Built REST APIs, role-based access control (RBAC), authentication and certificate validation modules, plus React screens and features.
- Cut API response times by 30%+ through query and API optimisation.

KSFE Chits — Digital Chit Fund Management Platform

Node.js · Express.js · Microservices

- Lead Backend Engineer digitising traditional chit fund operations for 1,000+ subscribers; designed the microservices architecture.
- Implemented auction logic, subscriber management, payment workflows and reporting with full auditability and high availability.

Syntasa — Behavioural & Enterprise Data Integration Platform

Node.js · Express.js · TypeScript · Python

- Built APIs integrating enterprise and behavioural datasets, plus Python ingestion and transformation pipelines.
- Improved API response times by 25%+ through optimisation.

PGOS — Project Governance Operating System

React · Node.js

- Built React screens and features for a governance platform with a centralised KPI library, periodic KPI capture, RAG status evaluation and project and portfolio health dashboards.

AccuCerts — Blockchain-Based Certification System

Node.js · Microservices · React

- Built microservices for tamper-proof certificate issuance and verification, integrated with React admin and user dashboards.

Additional projects: RTC (health-card verification for pandemic control, built for high concurrency), BlocHealth (secure digital health records, compliance-aligned), EQME (behavioural performance analytics with Python scoring and real-time React dashboards).

EDUCATION

B.Tech in Electronics & Communication Engineering — 2017 · CGPA 7.92

CERTIFICATIONS

Forward Deployed Engineering (FDE) — Udemy · Certificate of Completion
