Vigin V P

Full Stack Developer | Lead Backend Engineer

Thiruvananthapuram, Kerala, India · vpvigin@gmail.com · +91 8157025319

Nationality: Indian · Notice period: 60 days · Languages: English, Malayalam, Hindi, Tamil

Professional Summary

Full Stack Developer with 8+ years of experience building and maintaining software applications, with a strong foundation in Node.js, TypeScript, backend architecture and React. Currently Lead Backend Engineer at InApp Information Technologies, owning backend architecture, mentoring engineers and leading delivery on enterprise platforms.

Experienced across API development, microservices, database design, cloud integrations and scalable application features, using React, NestJS, Express.js, MongoDB, PostgreSQL, AWS, GCP and Docker. Committed to software quality through testing, debugging, code reviews and continuous improvement, writing maintainable code that meets real business requirements.

Actively expanding into AI-assisted development, Spec-Driven Development (SDD) and Seed Engineering to turn requirements into structured implementations and help teams deliver faster. Interested in Forward Deployed Engineering (FDE) roles that combine engineering with close customer collaboration on real-world problems.

Core Skills

Area	Skills
Languages	JavaScript, TypeScript, Python
Backend	Node.js, NestJS, Express.js, REST APIs, Microservices, System Design
Frontend	React
Databases	PostgreSQL, MySQL, MongoDB, Redis, Database Design
Cloud & DevOps	AWS (S3, SQS, SNS), Google Cloud Platform, Docker, CI/CD
Quality	Software Testing, Debugging, Code Reviews, Performance Optimization, Security Best Practices

Area	Skills
Modern Engineering	AI-Assisted Development, Spec-Driven Development (SDD), Seed Engineering, Forward Deployed Engineering (FDE)
Leadership	Team Leadership, Mentoring, Agile Delivery, Stakeholder Collaboration

Professional Experience

Systems Analyst Engineer (Lead Backend Engineer) — InApp Information Technologies

Aug 2021 – Present · Thiruvananthapuram, Kerala

- Lead backend architecture and microservices design using NestJS and TypeScript across enterprise client platforms.
- Own backend delivery end to end: requirements analysis, solution design, development, testing, deployment and maintenance.
- Mentor engineers, conduct code reviews and set coding standards for maintainable, well-tested code.
- Collaborate with React frontend teams and DevOps on integration, CI/CD and cloud deployments on AWS and GCP.
- Drive debugging, performance tuning and production stability for live systems.

Software Engineer — Accubits Technologies

Oct 2018 – Aug 2021

- Developed backend APIs and microservices using Node.js, Express.js and TypeScript.
- Built features for blockchain, healthcare and enterprise platforms, integrating with React dashboards.
- Implemented authentication, authorization and secure data-handling workflows.

Key Projects

GSB — Bilingual Credentialing Platform

NestJS · TypeScript · React

- Led backend architecture for a secure credentialing system recognising bilingual fluency.
- Designed and built REST APIs, role-based access control (RBAC), authentication and certificate validation modules.
- Optimised database queries and API performance to support scalable user growth.

KSFE Chits — Digital Financial & Chit Management Platform

Node.js · Express.js · Microservices

- Lead Backend Engineer for digitising traditional chit fund operations.
- Designed the microservices architecture and implemented auction logic, subscriber management, payment workflows and reporting.
- Ensured data consistency, auditability and high availability; led performance tuning for production stability.

Syntasa — Behavioural & Enterprise Data Integration Platform

Node.js · Express.js · TypeScript · Python

- Built backend services and scalable APIs integrating enterprise and behavioural datasets.
- Implemented Python-based data ingestion and transformation pipelines.
- Improved API response times and data processing efficiency through optimisation.

RTC — Health Card–Based Pandemic Control System

Node.js · Express.js

- Designed backend services and APIs for real-time digital health-card verification.
- Ensured scalability under high concurrent usage; supported reporting and monitoring for administrators.

AccuCerts — Blockchain-Based Certification System

Node.js · Microservices · React

- Built microservices for tamper-proof certificate issuance, validation and verification.
- Integrated backend APIs with React admin and user dashboards, with a focus on security and integrity.

BlocHealth — Digital Healthcare Ecosystem

Node.js · Express.js

- Designed APIs with strong authentication and authorisation for secure access to digital health records.
- Implemented data handling aligned with healthcare compliance requirements and optimised for concurrent access.

EQME — Behavioural Performance Management Platform

Node.js · Express.js · MongoDB · Python · React

- Built REST APIs for employee behavioural analytics and performance evaluation.
- Used Python for data processing, scoring algorithms and reporting; enabled real-time React dashboards.

Education

B.Tech in Electronics & Communication Engineering — 2017 · CGPA 7.92

Professional Interests

AI-assisted development, Spec-Driven Development (SDD), Seed Engineering and Forward Deployed Engineering (FDE); continuous learning across the full software development lifecycle.
